Rear Side Door Center Roller Bracket Replacement Removal Procedure

- 1. Remove the sliding door trim panel. Refer to Sliding Rear Side Door Trim Panel Replacement.
- 2. Open the door partially and support the door.
- 3. Remove the bolts (4) that retain the sliding side door center roller bracket (1) to the door.
- 4. Remove the nuts (2) that retain the sliding side door center roller bracket (1) to the door.
- 5. Slide the sliding side door center roller bracket (1) from the rear of the track.
- 6. Remove the sliding side door center roller bracket (1) from the vehicle.

Installation Procedure

- 1. Install the sliding side door center roller bracket (1) to the vehicle.
- 2. Slide the sliding side door center roller bracket (1) into the rear of the track.

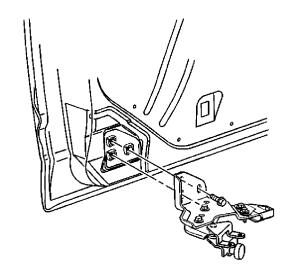

Caution: Refer to <u>Fastener Caution</u> in the Preface section.

- 3. Install the nuts (2) in order to retain the sliding side door center roller bracket (1) to the door and tighten to 25 N·m (18 lb ft).
- 4. Install the bolts (4) in order to retain the sliding side door center roller bracket (1) to the door and tighten to 25 N·m (18 lb ft).
- 5. Install the sliding door trim panel. Refer to Sliding Rear Side Door Trim Panel Replacement.
- 6. Close the door and inspect the operation of the door.

Rear Side Door Upper Roller Bracket Replacement Removal Procedure

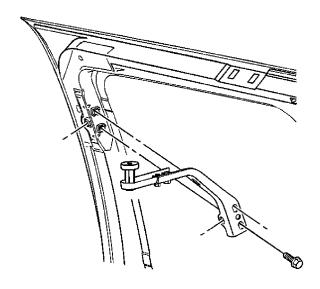

- 1. Remove the sliding side door upper roller bracket cover. Refer to Rear Side Door Upper Roller Bracket Garnish Molding Replacement.
- 2. Remove the sliding side door upper track garnish molding. Refer to Rear Side Door Upper Track Garnish Molding Replacement.
- 3. Remove the sliding door garnish molding. Refer to Rear Side Door Garnish Molding Replacement.

- 4. Remove the bolts that retain the upper roller bracket to the door.
- 5. Remove the sliding side door upper roller bracket from the rear of the upper track.
- 6. Remove the sliding side door upper roller bracket from the vehicle.

Installation Procedure

- 1. Install the sliding door upper roller bracket to the vehicle.
- 2. Install the sliding door upper roller bracket to the rear of the upper track.

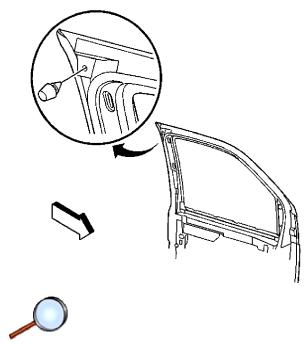

Caution: Refer to <u>Fastener Caution</u> in the Preface section.

- 3. Install the bolts that retain the upper roller bracket to the door and tighten to 25 N·m (18 lb ft).
- 4. Install the sliding side door upper track garnish molding. Refer to Rear Side Door Upper Track Garnish Molding Replacement.
- 5. Install the sliding door garnish molding. Refer to Rear Side Door Garnish Molding Replacement.
- 6. Install the sliding side door upper roller bracket cover. Refer to Rear Side Door Upper Roller Bracket Garnish Molding Replacement.

Hood Primary Latch Release Cable Replacement Removal Procedure

1. Raise and support the hood.

2. Remove the cable (1) from the hood latch (3).

Document ID: 794945 Page 2 of 4

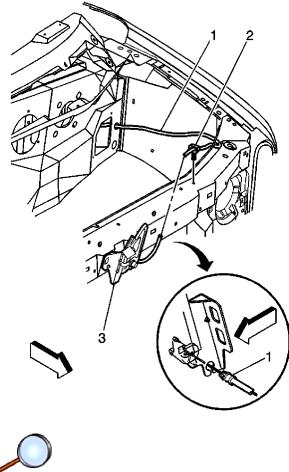

- 3. Remove the cable (1) from the retainer on the radiator support.
- 4. Push the cable (1) and the grommet into the cab from the engine compartment.
- 5. Remove the left side hinge pillar trim panel from the body. Refer to <u>Body Hinge Pillar Trim Panel Replacement</u>.
- 6. Remove the screws retaining the cable handle (3) to the body.
- 7. Remove the handle (3) from the body.
- 8. Remove the cable (1) from the vehicle.

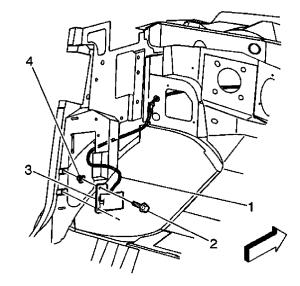

Installation Procedure

Document ID: 794945 Page 3 of 4

1. Install the cable (1) to the vehicle.

- 2. Route the cable (1) from the cabin into the engine compartment.
- 3. Install the cable grommet into the bulkhead.
- 4. Install the cable handle (3) to the body.

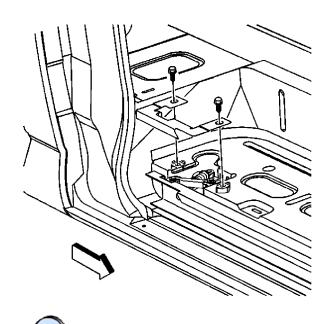

Document ID: 794945 Page 4 of 4

- 5. Install the screws in order to retain the cable handle (3) to the body.
- 6. Install the left side hinge pillar trim panel to the body. Refer to <u>Body Hinge Pillar Trim Panel</u> <u>Replacement</u>.
- 7. Install the cable (1) to the retainer on the radiator support.
- 8. Install the cable (1) to the hood latch.
- 9. Close the hood.

Front Side Door Upper Hinge and Lower Hinge Replacement

Removal Procedure

- 1. Remove the sealer that surrounds the hinge.
- 2. Scribe the location of the existing hinges on the body pillar or the door.
- 3. Mark the approximate centers of the mig welds on the hinge base.

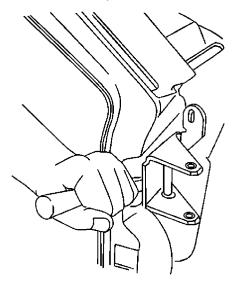

Document ID: 2129933 Page 2 of 4

4. Drill a 3 mm (1/8 in) pilot hole (5) completely through the spot welds (4) at each center punch mark.

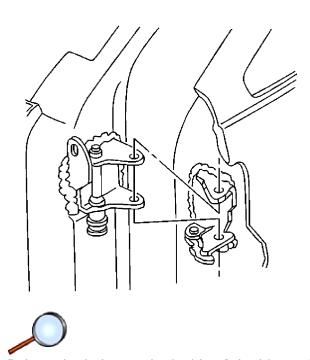

5. Drill a 13 mm (1/2 in) hole through the hinge base (6) and the body pillar or the door using the smaller hole as a pilot.

- 6. A small amount of weld may still retain the hinge base to the body pillar or the door. Drive a chisel between the hinge base and the body pillar or the door in order to separate the hinge from the body pillar or the door.
- 7. Remove the hinges from the door or the body pillar.

Installation Procedure

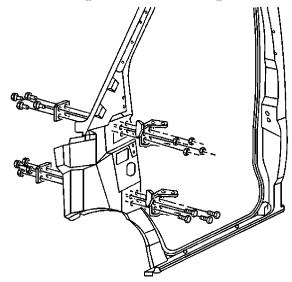

1. Deburr the holes on the inside of the hinge pillar or the door in order to insure the proper

Document ID: 2129933 Page 3 of 4

seating of the hinge and the backing plate. Inspect the body pillar and the door in order to ensure that the hinge seating zone on the body pillar or the door is flat.

- 2. Paint the inner and the outer surfaces of the hinge pillar or the door at the hinge mounting zone.
- 3. Coat the mating surface of the hinge with a medium bodied sealer.

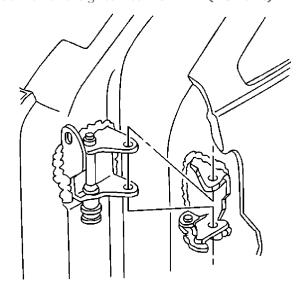

- 4. Position the bolt-on service replacement hinges within the scribe marks that were made on the body pillar or the door at the time of removal.
- 5. Install the hinge to the body pillar or the door using the bolts and the tapping plate that is supplied with the service replacement kit.

Caution: Refer to Fastener Caution in the Preface section.

- 6. Tighten the bolts to the recommended preliminary torque to 5 N·m (44 lb in).
- 7. Install the door to the body. Align the door as required. Do not close the door completely until you make a visual check in order to determine if the lock will correctly engage the striker and tighten to 25 N·m (18 lb ft).

Document ID: 2129933 Page 4 of 4

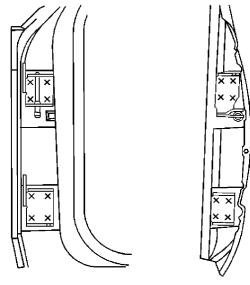

- 8. Apply the sealer around the hinges.9. Paint the hinge assembly.

Intermediate Side Door Wedge Replacement - Door Side

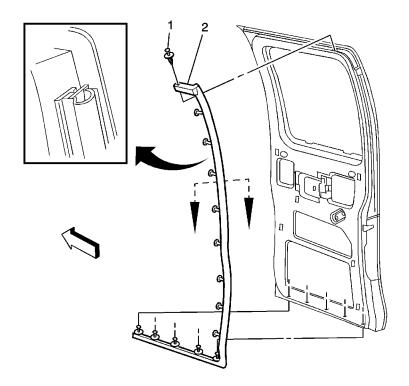

Callout	Component Name
	Intermediate Rear Side Door Upper Wedge Bolts (Qty: 2)
	Caution: Refer to <u>Fastener Caution</u> in the Preface section.
	Procedure
1	 Ensure that the door is properly aligned within the door opening before proceeding with the wedge adjustment. Using a soft marker, mark around the wedge for reference of the original position. Loosen the wedge. Move the wedge to eliminate drag on the door and to achieve the proper door position within the door opening, then position the wedge to achieve proper alignment to the door opening. Set the in/out adjustment for the proper door seal engagement making sure the door closing efforts are correct.
	Tighten 10 N·m (89 lb in)
2	Intermediate Rear Side Door Upper Wedge

Intermediate Side Door Hinge Replacement - Body Side Removal Procedure

- 1. Paint the service hinges body color.
- 2. For forward most intermediate door (60 door) hinge replacement move the front seat forward, clear of B-pillar.
- 3. Remove the door that requires hinge replacement. Refer to <u>Intermediate Side Door</u> Replacement.
- 4. Remove interior trim at pillar. Refer to <u>Upper Pillar Garnish Molding Replacement</u>, <u>Lower Pillar Garnish Molding Replacement</u>, or <u>Center Pillar Upper Garnish Molding Replacement</u> Right Side.

5. Cut the production body side door hinge. Use a reciprocating saw to gain access for drilling.

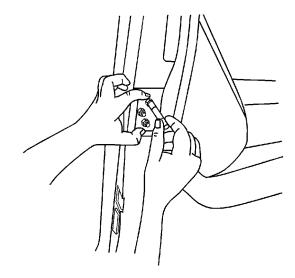

© 2010 General Motors Corporation. All rights reserved.

Document ID: 2130003 Page 2 of 4

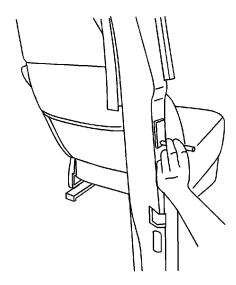

6. Tape around the periphery of the body side hinge to mark the hinge (1) location.

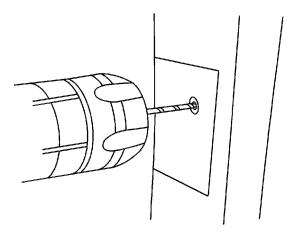

Note: For the forward most intermediate door (60 door), move the backing plate rearward 4 mm (0.16 in) before marking the 3-hole pattern.

7. Place the service backing plate on the production hinge surface and mark the 3-hole pattern.

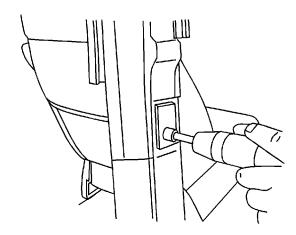

8. Center punch the marked 3-hole pattern.

- 9. Drill pilot holes with a 3 mm (1/8 in) drill bit all the way through the production hinge and body pillar.
- 10. Protect the interior of the vehicle and the adjacent door interior from potential metal grindings.
- 11. Lightly sand the body side hinge surface to locate the 3 production welds, look for witness mark.
- 12. Center punch the 3 production welds for locating drill bit.

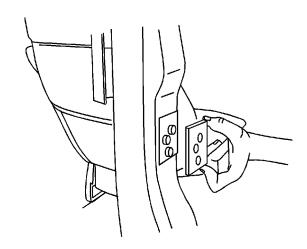

- 13. Using the center punch locations, use a 19 mm (3/4 inch) rota-broach to drill out the remainder of the production hinge without drilling through the body side hinge pillar.
- 14. Cut the hinge weld nuggets off.
- 15. Grind the pillar hinge mating surface flush.
- 16. Using the pilot holes drilled to center the drill bit, drill 13 mm (33/64 in) holes through the pillar.

Document ID: 2130003 Page 4 of 4

Installation Procedure

Note: Prior to painting, refer to the publication GM 4901M-D-2000 GM Approved Refinish Materials for recommended products. Do not combine paint systems. Refer to paint manufacturer's recommendations.

1. Paint the bare surface of the pillar hinge mounting area according to GM refinish specification GM 4901M-D-2000.

Caution: Refer to <u>Fastener Caution</u> in the Preface section.

- 2. Install the service hinge and backing plate and tighten to 23 N·m (17 lb ft).
- 3. Apply clear silicone sealant around the entire edge of the service hinge to prevent water leaks.
- 4. Install the door. Refer to Intermediate Side Door Replacement.
- 5. Adjust adjacent front side door striker as necessary to achieve flushness between the two doors. Refer to Rear Side Door Latch Striker Adjustment Front.
- 6. Install interior trim at pillar. Refer to <u>Upper Pillar Garnish Molding Replacement</u>, <u>Lower Pillar Garnish Molding Replacement</u>, or <u>Center Pillar Upper Garnish Molding Replacement</u> <u>Right Side</u>.

Hood Primary and Secondary Latch Replacement Removal Procedure

- 1. Raise and support the hood.
- 2. Mark the location of the hood latch and the fasteners.
- 3. Remove the bolts retaining the hood latch to the radiator support (2).
- 4. Remove the hood latch from the radiator support.
- 5. Remove the hood release cable from the hood latch (4).

Installation Procedure

- 1. Install the hood release cable to the hood latch (4).
- 2. Install the hood latch to the radiator support (2).
- 3. Install the bolts retaining the hood latch to the radiator support.

Do not tighten the bolts.

- 4. Align the hood latch and the fasteners with the marks made prior to the removal.
- 5. Use the following procedure in order to adjust the hood latch:
 - 5.1. Adjust the hood latch to the left or to the right until the striker in the hood easily engages the latch.
 - 5.2. Adjust the hood latch height.
 - 5.3. Adjust the front hood bumpers in order to ensure that the top of the hood is flush with the fenders.

Caution: Refer to <u>Fastener Caution</u> in the Preface section.

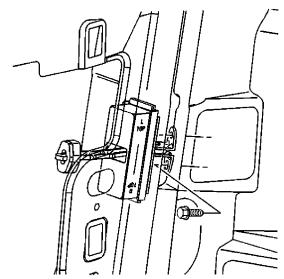

- 6. Tighten the bolts retaining the hood latch to the radiator support and tighten to 15 N·m (11 lb ft).
- 7. Close the hood.

Radiator Support Replacement

Removal Procedure

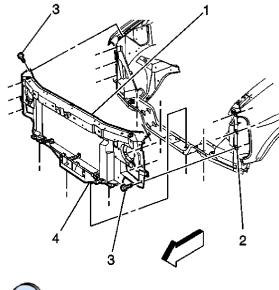

- 1. Disconnect the battery negative cable. Refer to <u>Battery Negative Cable Disconnection and</u> Connection.
- 2. Remove the radiator from the vehicle. Refer to Radiator Replacement.
- 3. Remove the grille. Refer to Grille Replacement.
- 4. Remove the headlamp and the parking lamp connectors and the harnesses from the radiator support.
- 5. Remove the headlamp assemblies. Refer to <u>Sealed Beam Headlamp Replacement</u> or <u>Headlamp Capsule Replacement</u>.
- 6. Remove the wiring harnesses from the clips at the front of the support and the back of the support.
- 7. Remove the ground wires from the support.
- 8. Remove the primary hood latch cable from the sheet metal support and the latch. Refer to Hood Primary and Secondary Latch Replacement.
- 9. Remove the fuel vapor canister and the lines from the radiator support.
- 10. Remove the air conditioning condenser and the lines, if equipped. Refer to <u>Air Conditioning</u> Condenser Replacement.

- 11. Remove the forward lamp harness from the radiator support (1).
- 12. Remove the bolts (3) retaining the radiator support (1) to the vehicle.
- 13. Remove the radiator support (1) from the vehicle.

Installation Procedure

1. Install the radiator support (1) to the vehicle.

Caution: Refer to Fastener Caution in the Preface section.

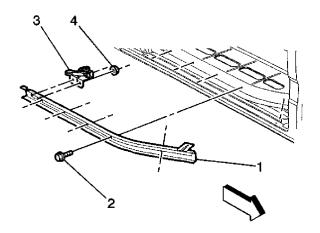

- 2. Install the bolts (3) in order to retain the radiator support (1) to the vehicle and tighten to 25 N·m (18 lb ft).
- 3. Install the forward lamp harness to the radiator support (1).
- 4. Install the radiator to the radiator support. Refer to Radiator Replacement.
- 5. Install the air conditioning condenser to the radiator support (1). Refer to <u>Air Conditioning</u> <u>Condenser Replacement</u>.
- 6. Install the fuel vapor canister and the lines to the radiator support.
- 7. Install the headlamps. Refer to <u>Sealed Beam Headlamp Replacement</u> or <u>Headlamp Capsule Replacement</u>.
- 8. Install the primary hood latch bracket to the sheet metal support. Refer to <u>Hood Primary and Secondary Latch Replacement</u>.
- 9. Install the ground wires to the support.
- 10. Install the wiring harnesses into the clips on the front and the back of the support.
- 11. Install the headlamp connectors and the parking lamp connectors to the lamps.
- 12. Install the grille. Refer to Grille Replacement.
- 13. Install the radiator. Refer to Radiator Replacement.
- 14. Connect the negative battery cable. Refer to <u>Battery Negative Cable Disconnection and</u> Connection.
